

Amendments to the Claims:

Please amend claims 1, 10, 11, all as shown below.

All pending claims are reproduced below, including those that remain unchanged.

1. (Currently amended) A method for providing data detection from Web content information for mobile devices comprising the steps of:

receiving a URL from a user;

accessing a Web page data file identified by the URL;

detecting a content portion from the Web page data file, the content portion adapted to be enhanced by introducing at least one new link indication to a service;

searching the content portion to identify Web content data, the web content data included in the content portion and adapted to be accessed to provide at least one new link service from a mobile device through a wireless connection; ~~and~~

displaying only the identified web content data using the at least one new link indication on a display; of the mobile device; and

hiding the remainder of the content portion not associated with the at least one new link indications ~~not displayed on~~ from the display of the mobile device.

2. (Previously presented) The method of claim 1 further comprising the steps of:

providing a user keypad selection enabling the link indication to be activated; and

using the wireless connection to activate the link indication when the user keypad selection is made.

3. (Original) The method of claim 1, wherein the Web content data is a telephone number.
4. (Original) The method of claim 2, wherein the Web content data is a telephone number, and wherein the link indication is activated by dialing the number.
5. (Original) The method of claim 1, wherein the Web content data is an address number.
6. (Original) The method of claim 2, wherein the Web content data is an address, and wherein the link indication is activated by obtaining map data showing a location for the address.
7. (Original) The method of claim 1, wherein the Web content data is an email address.
8. (Original) The method of claim 2, wherein the Web content data is an email address, and wherein the link indication is activated to enable the email to be initiated.
9. (Cancelled)
10. (Currently amended) A method for providing telephone access using Web page information comprising the steps of:
 - receiving a URL from a user;
 - accessing a Web page data file identified by the URL;
 - detecting a content portion from the Web page data file;
 - searching the content portion to identify Web content data, the web content data included in the content portion;

identifying at least one address from the web content data in the Web page data file;
displaying only the identified address for the user on a display of the mobile device;
hiding the remainder of the content portion not associated with the identified address from
the display of the mobile device; and
providing a user keypad selection of a mobile device enabling a map to be provided showing
a location for the identified address.

11. (Currently amended) A method for providing telephone access using Web page
information comprising the steps of:

receiving a URL from a user;
accessing a Web page data file identified by the URL;
detecting a content portion from the Web page data file;
searching the content portion to identify Web content data, the web content data included in
the content portion;
identifying at least one email address from the web_content data in the Web page data file;
displaying only the identified address for the user on a display of the mobile device;
hiding the remainder of the content portion not associated with the identified address from
the display of the mobile device; and
providing a user keypad selection of a mobile device enabling an email to be initiated.

12. (Original) The method of claim 1, wherein the display is provided on a device consisting
of one or more of the following:

an Internet phone;
a personal digital assistant; and

a two way page.

13. (Original) The method of claim 1, wherein the detection occurs in a network server.
14. (Original) The method of claim 1, wherein the detection occurs within a Web browser.
